Subject: Job Posting Notification - Business Systems Analyst - 12000981

Hello Andrew,

A new job matching the preferences you selected in your profile has been posted on the Careers section of our Internet site.

Business Systems Analyst - 12000981

Job: Information Technology
Primary Location: United States of America
Hiring Manager: Robert Decius
Department: Power Generation Systems

Department Overview

The Information Technology (IT) organization is structured to support PG&E's core function of providing reliable gas and electric transmission and distribution services that will result in delighted customers, energized employees, rewarded shareholders and environmental leadership. IT functions are to design, develop, operate and maintain the information and telecommunications systems that enable the Company to meet its

commitment to customers: Keeping the Lights on and the Gas Flowing, Delivering at a Reasonable Price, Meeting Our Commitments, and Simple and Convenient Options.

IT supports the business vision by improving service quality, increasing capabilities through the development of additional functionality, implementing new technology, reducing costs, increasing productivity, and facilitating organizational and business effectiveness through enabling technologies

Position Summary

The main role of the Business Systems Analyst is to analyze and design system solutions for the business and IT organization. This involves working with business and technical leaders to obtain the best possible system solution for solving business issues and requests. The Business Systems Analyst is viewed as an integral and strategic partner and business liaison in technology decisions. He/she is also the subject matter expert and has a deep understanding for the systems and application that he/she supports. The Business System Analyst provides technical consultation and analyzes the complex business problems to be solved with automated systems. He/she provides the most complex technical expertise in identifying, evaluating, and developing systems and procedures that are cost effective and meet user requirements. He/she is able to translate business requirements into technical requirements and create a functional design for the developers. Technical means the ability to document in detail how the system will behave and what programs, parameters, etc. that the developer must modify to meet the specifications in the functional design. Employees in this job family are required to regularly make recommendations on appropriate system alternatives and/or enhancements to current systems. Ensures that the design and integration of proposed system, software and hardware solutions leads to the development and growth of the business through effective use of technology. Integrally involved in 'buy versus build' decisions. Issues and interactions addressed by the Business Systems Analyst tend to have strategic importance.

Responsibilities:

Acts as a technical liaison between Applications Analyst/Programmers and Business Sponsors/Analyst; analyze and assess existing business systems, processes, and procedures.

- Aligns the technology solutions with the business strategies
- Designs the configuration of system parameters to enable application functions and performs according to specifications
- Analyzes production data to assist with defects or maintains system accuracy
- Provides support to developers and tests when they perform unit, string, and functional integration tests to ensure application solutions and reports satisfy defined functional and/or technical specifications
- Identifies, proposes and influences business solutions, negotiates deliverables and requirements across multiple business customers or organizations
- Prepares communications and makes presentations on system enhancements and/or alternatives
- Devises or modifies procedures to solve complex problems considering computer equipment capacity and limitations, operating time, and form of desired results
- Provides input and supports planning and prioritization for business process engineering related activities, including developing the business unit process engineering plan and integrating that plan with the corporate plan

Minimum Qualifications

- BA/BS in Computer Science, Business, or equivalent experience
- Minimum of 3 years of systems analysis and consulting experience
- Strong analytical skills with aptitude for troubleshooting and problem solving

Pacific Gas and Electric Company is an AA/EEO employer that actively pursues and hires a diverse workforce.
